Committee on Oversight and Government Reform
U.S House of Representatives
2157 Rayburn House Office Building
Washington, D.C. 20515

On behalf of the Alliance for Taxpayer Access, a coalition of more than 100 patient groups, physicians, researchers, educational institutions, publishers and health promotion organizations that support barrier-free access to taxpayer-funded research, I am writing to express strong opposition to H.R. 3699, the Research Works Act.

H.R.3699 would repeal the successful National Institutes of Health (NIH) Public Access Policy, which currently ensures that the results of our nation's \$29 billion annual investment in biomedical research reach the broadest possible audience. It would also prohibit any other federal agency from enacting similar policies, stifling our nation's ability to effectively leverage our investment in scientific research.

The NIH Public Access Policy has a proven track record of delivering positive benefits to the public, while holding the government accountable for public investment in scientific research. It provides access to more than a half a million individual users each day, including health care professionals, patients, caregivers and their families. These users rely on the accessibility of this information to improve their understanding of the medical conditions they are facing as well as their quality of care.

As of today, the NIH's publicly accessible database, PubMed Central, contains more than 115,000 articles on hypertension research, 150,000 on diabetes research, and more than 110,000 on heart disease research. As citizens whose tax dollars underwrite this research, we have a right to expect that crucial details of the most recent medical advancements in these areas are made available to us, and to the doctors and caregivers whose responsibilities are the health and long life of all Americans.

H.R. 3699 will affect access to not only these vital biomedical research results stemming from NIH funding, but also scientific research underwritten by **all** other federal agencies. Access to critical information on energy, the environment, climate change, and hundreds of other areas that

directly impact the lives and well being of the public would be unfairly limited by this proposed legislation.

At a time when lawmakers should be focused on improving the economy and ensuring taxpayer dollars are spent wisely, H.R. 3699 does exactly the opposite. It imposes restrictions on access to peer-reviewed research results that benefit one small sector of an industry, rather than encourage their use by the widest possible audience.

Our federal government funds research with the expectation that the resulting ideas and discoveries will propel science, stimulate the economy and improve the lives of all Americans. Public support for science is enhanced when the public can directly see the benefits from our investment in scientific research. Scientific progress depends on the broadest possible dissemination of knowledge, and the ability to build upon the work of others.

Given the success of the NIH policy, the Alliance for Taxpayer Access strongly opposes H.R. 3699, the Research Works Act. We look forward to working with you to ensure that the NIH Public Policy continues to serve science, the research community and the public, and that similar policies can be enacted across all federal science agencies.

Thank you for considering our views. Please contact me if you need further information on our long-standing commitment to the success of crucial public access policies.

Sincerely,

A handwritten signature in black ink that reads "Heather Joseph". The signature is written in a cursive, flowing style.
